

Software Development

We have your systems communicating with one another by establishing interfaces between your administrative applications and your learning platform. Moreover, we develop applications for you (e.g. specific reports), or connect your applications to SWTICHaai / Shibboleth.

As an ILIAS core development member, we continue to further develop the ILIAS core. For customer-specific ILIAS extensions, we create corresponding plugins for you and assume the discussion and conception regarding any integration of the plugin into the ILIAS core.

Example "Connection of Management System and Learning Platform"

You manage your courses and the course participants in any administration system. We can provide you with an interface that installs the courses in your learning platform (ILIAS) and enrolls the participants for courses.

Example "Integration of course administration on your website"

We write a web application, which can be optimally integrated into your website; i.e. in the form of a TYPO3 plugin. Through this web application, potential course participants can get information and register for the courses. Data maintenance is ensured by your management system, for which we build all interfaces required.

Our Rates

Hourly rate	CHF 1440
Hourly rate Euro area at an exchange rate of CHF 1.20 / EUR 1 We assume the exchange rate risk for our contract customers in the Euro area ¹ .	EUR 1200

All prices are exclusive VAT. Foreign customers receive invoices without Swiss VAT. It is the responsibility of the customer to pay the value-added tax abroad if necessary.

We would be happy to develop for you and look forward to your non-binding inquiry:
